<b>Comments /notes on tonight's mission and this interpretation:</b> <p>There are large concentrations of intense heat on the Northern, Southern and Southwest sides of the fire. There are three areas of intense heat outside the main heat perimeter on the South West side of the fire. The rest of the fire is comprised of scattered heat. The fire is intense enough that the Phoenix sensor was picking up heat in the smoke on the Southern porition of the fire. The Western side of the fire has crossed Widows Creek. The fire is now North of China Hot Spring, South of Lick Spring, West of Widows Creek Burn and East of Big Spring.</p>
